DETAILED ACTION

Allowable Subject Matter

1. Claims 2-20 allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Prior art failed to establish an ESD protection circuit with a low voltage silicon controlled rectifier having a MOS transistor and an interdigitated diode having a plurality of anode regions of first conductivity type connected to input/output pad and drain of the MOS transistor and a plurality of cathode regions of opposite conductivity type connected to power.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 1 rejected under 35 U.S.C. 102(e) as being anticipated by Chen et al.

(2004/0100745).

Chen et al. disclose a silicon-controlled rectifier with dynamic holding voltage for on-chip electrostatic discharge protection where in Fig. 8, a pad 170 connected to diode 17 and a transistor and a transistor 174. Furthermore, in page 7 paragraph 88, it is stated that during ND-mode ESD event, a part of the ESD current flows to Vss line through a parasitic diode and low voltage level is provided to gates of MOS transistors to trigger silicon-controlled rectifier and to discharge an ESD current.
